Project Title: Dr. Dre Website

I want this to be a multi-page site. Site navigation in probably in traditional locations toward the top except on the home page. Dr. Dre is well-known and has a long history to draw from.

- **Home Page** – Introduce large scale photo of Dr. Dre, anchor button to the more traditional informational website found in a location that works well with the photo
- **Music Career**
- **Personal Life**
- **Awards**
- **Sources** – Probably just the Wikipedia page
